

Immunisation

Immunisation is the safest way to protect your baby from very serious diseases such as measles, meningitis, whooping cough and polio.

The childhood vaccine programme now offers extra protection against:

- meningitis
- blood poisoning
- pneumonia
- ear infections

For more information:

- pick up the leaflet *Immunisation for babies up to 15 months of age*
- talk to your doctor, practice nurse or health visitor
- visit www.dhsspsni.gov.uk/phealth or www.immunisation.nhs.uk
